PhD scholarships in the life sciences starting September 2016

The special feature of our 3-year PhD program is its emphasis on interdisciplinary interactions. We want to train the next generation of scientists to study complex biological processes that cannot be adequately understood within the limits of a single discipline. Traditionally separate fields covered include:

- Biophysics
- Structural, molecular and cellular biology
- Biochemistry and genetics
- Bioinformatics, genomics and proteomics
- Evolutionary biology

Training is offered in a range of core and specialised skills; a thesis advisory committee provides individual project guidance. English is the language of the school; places are fully funded.

The Max Planck Institute for Developmental Biology runs the program in conjunction with the Friedrich Miescher Laboratory and the Eberhard Karls University Tuebingen.

More information and online application at http://www.imprs.tuebingen.mpg.de

Application deadline: February 28, 2016

Contact: Sarah Danes, IMPRS Coordinator
Max Planck Institute for Developmental Biology, Spemannstr. 35, 72076 Tuebingen, Germany
